

(A) Screenshot-anchored geometry

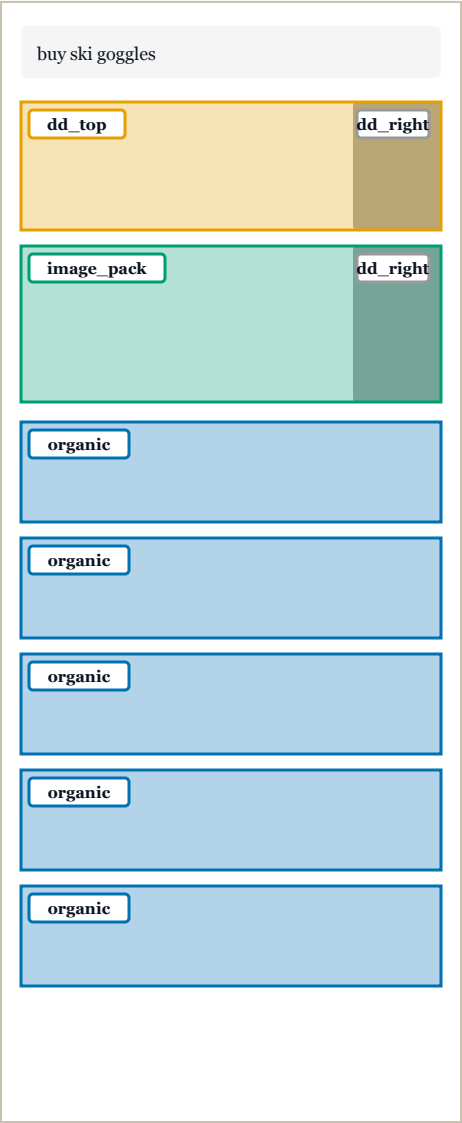

row-projection on main column

CV-detected card spans (dashed). Right-rail cards struck through: detected but off-axis.

(B) HTML semantic typing

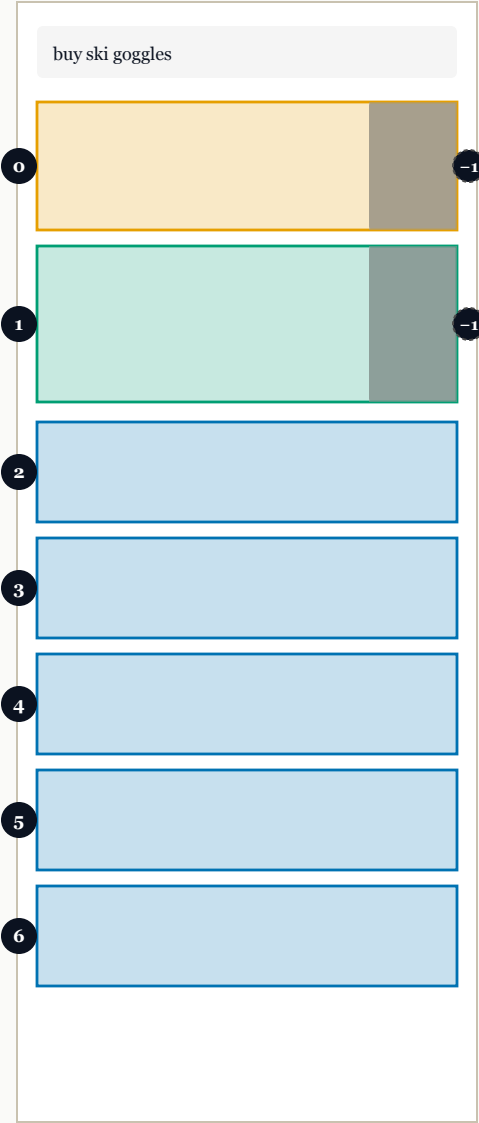

8-tier label chain

Labels via heading text → class → data-attrid chain. 13 element types incl. off-axis dd_right.

(C) Spatial join

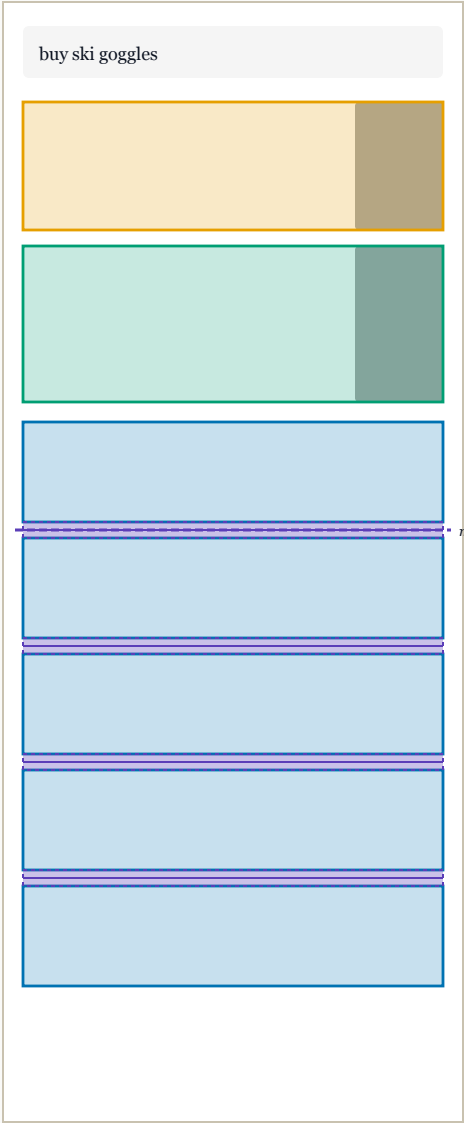

labels bound by document order

Position 0...N in display order. Right-rail and footer pulled to position -1.

(D) Midpoint-split gap-fill

organic bboxes extended

Adjacent organic pairs share a midpoint; gap-fill claims every Y for exactly one bbox.
